

Mobile Mammography

Increasing healthcare access to better detect signs of breast cancer

Ascension Saint Thomas offers Tennessee's First 3D Mobile Mammography Coach. The 44-foot coach is outfitted with an imaging test that creates a three-dimensional picture of the breast. These mobile mammography services are available in 26 counties in the Middle Tennessee area, and can be booked by your company to improve access to women's healthcare for your employees.

Screening mammograms are critical to early detection and a reduction in late-stage breast cancer and breast cancer mortality, and are important for women to get yearly beginning at age 40.

How it works

Connect with us to learn more and schedule Mobile Mammography at your place of business.

Once booked, a link is provided for employees to schedule a 30 minute time slot for the exam.

The employee's insurance is billed to cover the cost, the same as if they visited the hospital for the exam.
